Université de Strasbourg

1. Introduction

- BDR Thermea: creating smart thermal comfort solutions to reduce the carbon footprint
- 1 Solution: Heat Pumps

2. Heat Pumps

3. Project Objectives

- Create a pipeline that can automatically call a software on a model
- Expand the pipeline to more complex tasks, like automatic FMU generation
- Implement a method to automate model validation

4. Next Steps of the Project

- Analysis of current repositories
- Pipeline Creation and Extension
- Automation of Model Validation
